

*We masterfully lead the restructuring of the architecture IT and optimization of the technological environment.*

## PROJECT SHEET

CONSULTING SERVICES ON INFRASTRUCTURE AND CYBERSECURITY

### CLIENT

QUÉBEC ASSOCIATION FOR THE RECORDING, CONCERT AND VIDEO INDUSTRIES (ADISQ) AND A COLLECTIVE MANAGEMENT ORGANIZATION FOR THE RIGHTS OF MAKERS OF SOUND RECORDINGS AND MUSIC VIDEOS (SOPROQ)

### CHALLENGE

Assess the health of the client's infrastructure and provide architectural consulting services.

### Implementation

The starting point of the mandate was a questioning of the efficiency and security of the systems in place. Following an analysis of the situation, we realized that the two organizations shared a technological debt that put them at risk. Thanks to our resident expert in IT architecture, we have implemented an environmental restructuring plan, including a review of internal services which include Microsoft 365 services as well as the move of a main application on Azure. Our outsourcing resource quickly became an important player in the project, acting as a trusted person to senior management and facilitating communications between the various stakeholders.

### Results

Following the success of this large-scale project, the two organizations can now benefit from a high-performance IT architecture and a system structure that is immune to data theft or theft itself.
