

*Our team of experts was able to target the cybersecurity issues to help the client prevent attacks.*

## PROJECT SHEET

CYBERSECURITY AUDIT OF CLOUD INFRASTRUCTURE AND ARCHITECTURAL CONSULTING SERVICES

### ■ CLIENT

XRM VISION

### ■ CHALLENGE

Present to the client a global portrait of his various cloud computing environments.

### Implementation

XRM Vision works with Microsoft 365, Azure and Dynamics 365. We were mandated to carry out an exhaustive analysis of these environments, both to detect threats and to validate their use with the company's growth plan. Thus, the discovery phase was used to assess the vulnerabilities of various services and configurations, to then support the management team in the steps to remedy the points identified in the investigation. The deployment of corrective measures was led by our expert in residence, who was on site to ensure that the process ran smoothly. This relationship solidified over time and Indominus was invited to participate in the security architecture of this customer's new application: XRM Tandem.

### Results

Our involvement made it possible to establish an exhaustive list of system vulnerabilities as well as to put in place a clear plan to resolve the cybersecurity issues identified. The success of this project is mainly due to the level of collaboration between the expert in residence and the Indominus team of consultants.
